

SOH test from Autel

Autel SOH Test (CARB Approved): Professional HV battery health test for EVs and hybrids. Compatible with all Autel devices from MX900 onwards (if no EV package is present). Provides accurate measurements of capacity, cell balance, internal resistance and overall battery state. Perfect for diagnosis, maintenance and sales inspections.

Description

The Autel SOH Test (State of Health Test) is a professional health test for high voltage batteries in electric and hybrid vehicles. This test is CARB Approved, which means it meets the most stringent quality and accuracy standards for battery diagnosis.

The SOH Test allows the technician to accurately analyze the residual capacity, performance, cell balance, internal resistance, thermal values and overall health of the HV battery - without disassembly or risk.

This paid test module is suitable for all Autel devices starting with the MX900. provided the device is not equipped with the optional EV package. For devices that do have an EV package, the SOH Test is already included and thus free to use.

The Autel SOH Test is ideal for professional workshops, inspection centers, EV specialists, and car dealers who want to provide transparent and reliable battery reports for maintenance, warranty claims, and purchase inspections of used EVs.
