

se diagnostics

As cars become more
complex, we make their
diagnostics easier.

Discover fast, accurate and reliable
diagnostic capabilities with **seone**.

Seone makes easy-to-use OEM software

Seone is a complete solution for various OEM software, in one application and on one device. The software runs directly on the Sediagnosics laptops, so you will have fast and reliable connection to all vehicles.

What is OEM software?

OEM software is diagnostic software from brand manufacturers, used by dealers.

Why use OEM software?

This software offers a lot of possibilities such as diagnosing, teaching of car modules, ADAS calibration, software updates and original documentation.

For all systems of the vehicle

OEM software offers the possibility to perform diagnostics and programming on all possible systems of a vehicle. In addition, all analyses are complete and reliable.

Authentic software from the manufacturer

OEM diagnostics uses the original software from the manufacturer, which guarantees the highest quality diagnostics and programming.

Always up to date

The OEM software is regularly updated, so that you always have the latest information to perform diagnostics and programming.

sediagnostics

Let's start...

1. Choose from two distinct hardware packages with pre-installed Seone software to suit your needs.

Sediagnosics Seone Laptop

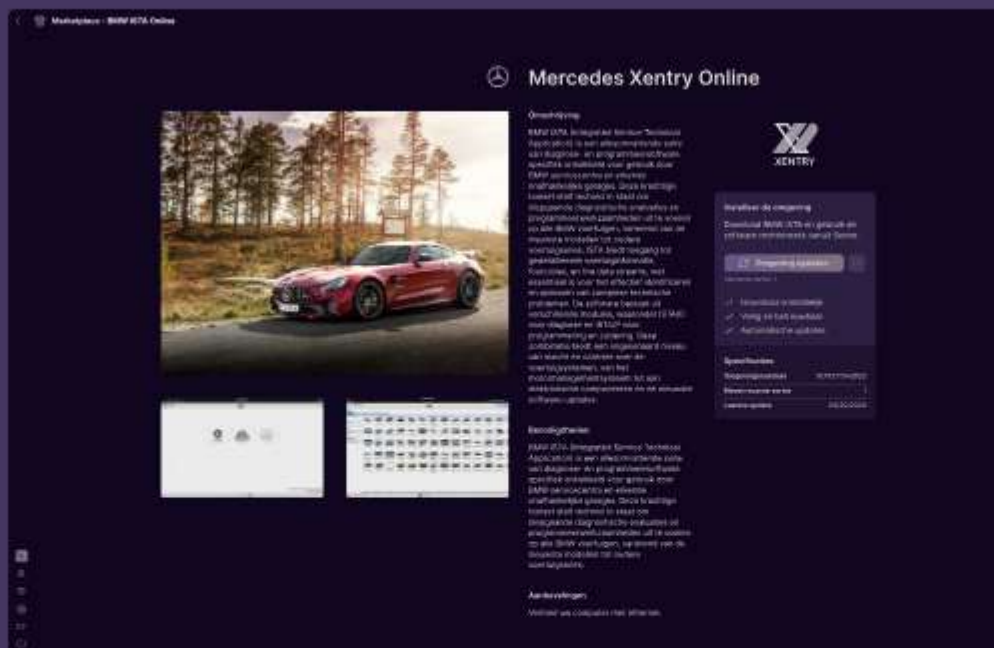

15.6-inch
i7-1360P Processor
32 GB DDR5 RAM
2 TB M.2 SSD

Sediagnosics Seone Rugged Laptop

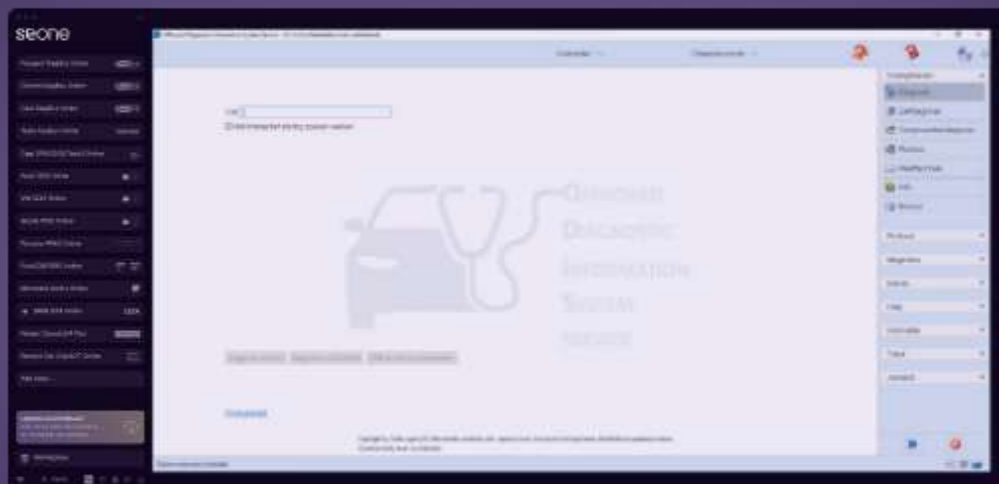

15.6-inch
i7-AX200 Processor
32 GB DDR5 RAM
2 TB M.2 SSD

2. Download the OEM software you desire easily from the Seone Marketplace.

sediagnosics

3. Use either with your manufacturer account and license, or opt for our ticket system with supported OEM partner software.

4. Choose from our wide range of supported VCI the one that matches your needs.

... and experience how diagnostics are made easier.

se diagnostics

As cars become more complex, we make their *diagnostics* easier.

Experience the benefits yourself!

Need

Cars are becoming increasingly complex and are now almost entirely controlled by software. OEM diagnoses and programming are indispensable in this rapidly changing world.

New market opportunity

By performing OEM diagnostics yourself, you have the opportunity to tap into new markets and expand your own services. This can increase your company's market share, leading to more sales and growth.

Time and cost savings

Returning a vehicle to the dealer is often a cumbersome process where the vehicle is unavailable for a long time. By carrying out diagnostics and programming in-house, you save both time and money.
